### **Education**

Bachelor of science in Computer Engineering.

Enugu state university of science and technology, Nigeria.

Expected Graduation Year: 2017-2022.

### **Summary**

Dedicated and skilled frontend developer with 1 year and 6 months of experience in designing and developing user-friendly, responsive web applications, translating design mockups and wireframes into clean, efficient, and well-documented code. Proficient in HTML, CSS, and JavaScript. Strong interest in learning to become a better developer. Collaborative team player with excellent communication skills and a passion for staying updated with the latest frontend technologies and trends.

### **SKILLS**

JavaScript • HTML • CSS • SASS • Next.js • Tailwind.Css • TypeScript  
•Postman • Version Control (Git/GitHub)

# Experience

Frontend Developer – Audix

Remote · Sept 2023 – July 2024

[audix.co](https://audix.co)

Worked with a development team at Audix, contributing to the design and implementation of web interfaces and web3 tools aimed at improving user experience and investor safety.

 *Key Responsibilities & Achievements:*

- **Email Template Development:**  
Designed and developed multiple responsive email templates using **HTML tables** to ensure compatibility across all major email clients.
- **Web Page & Dashboard Development:**  
Collaborated with cross-functional teams to build key pages of the Audix web platform, including the main **dashboard interface**.
- **Mobile Responsiveness:**  
Took full responsibility of the **design**, ensuring pixel-perfect responsiveness across various devices and screen sizes.
- **API Integration:**  
Consumed multiple external APIs to display real-time, relevant data to users. Delivered reliable frontend integration for live project data and updates.
- **Search Functionality:**  
Implemented a dynamic search component to help users locate specific tokens or projects. Integrated **debouncing** to optimize API calls and **localStorage caching** for faster access to previously searched items.

- **Web3 Product Development:**  
Worked with the team to build and launch a **Web3 project risk filter**, helping subscribers identify and avoid Rug pulls. Enabled advanced filtering based on custom parameters to promote safe investment decisions.

#### *Tech Stack:*

TypeScript · JavaScript · React.js · Nest.js · CSS/SCSS

### Frontend Developer – Hermex Travels

Remote · Nov 2024 – Present

#### [Hermextravels.com](https://hermextravels.com)

**Hermex** is a **travel tech platform**, offering services similar to online travel agencies, flight booking, hotels booking, events planning.

Built and maintained scalable hotel booking features for the hotels section for Hermex Travels, a modern travel tech platform offering hotel search, pricing, and sentiment-based reviews through Hermex official API.

#### *Key Responsibilities & Achievements:*

- **Hotel Search System:**  
Developed a dynamic hotel search interface using **Next.js**, enabling users to filter results by location, dates, price range, number of guests, and lodging type. Integrated with Hermex's hotel data API to fetch real-time search results.
- **Hotel Details Page:**  
Built a detailed hotel information component with tabbed views for **Overview, Rooms, Amenities, and Guest Reviews**. Used **React Hooks** and conditional rendering for smooth UX transitions.

- **Room Rates & Prebooking Flow:**  
Integrated Hermex's **Get Rates API** to display live room rates per hotel. Implemented `localStorage` logic to persist rate selections, and created a **Prebook modal** with session-based authentication for secure user flow.
- **User Reviews with Sentiment Analysis:**  
Designed a user review system with tabbed interfaces for submitting and viewing reviews. Fetched and displayed **sentiment-scored reviews** from the Hermex API, allowing users to make informed decisions based on positive/neutral/negative feedback.
- **Modular & Reusable Components:**  
Refactored codebase to ensure friendly scalability. Developed reusable components like **SearchBar**, **ReviewSection**, **LoginModal**, and **ImageCarousel** to improve maintainability.
- **Collaboration & Code Review:**  
Worked collaboratively with the team lead, reviewed PRs from the dev branch, and learned advanced patterns in API integration, state management, and UX optimization.
- Built a newsletter subscription component with API integration, customers can subscribe and unsubscribe.
- Implemented hotel recommendation fetching with location fallback logic. Data is retrieved from the API using lat and lon from `localStorage` (`hotelsSearchData`), problem was the component always showed the fallback location even when a user search for a desired location coordinates. Parsed JSON stored in state and `localStorage` for reuse. Added logging for API responses to debug missing data and confirmed successful rendering of sample hotel objects.
